

Broadspeed® OfficeSuite

A simple and flexible hosted IP phone system for business.

Focus on your business, not your phone system. Designed for small and medium size businesses, Broadspeed OfficeSuite is a highly cost-effective network-based alternative to premises key systems and PBXs. It is a feature-rich, broadband solution that requires no capital investment and is easy to maintain.

Leverage the advantages of an end-to-end managed service delivered on a secure network with proven business-class quality and reliability, at an affordable price. Plus Broadspeed OfficeSuite offers low total cost of ownership, by eliminating the need for expensive maintenance contracts and other traditional service charges.

The flexible infrastructure enables you to add users as needed, without the need to upgrade your equipment. In fact, the latest technology and feature enhancements are provided seamlessly within the network as they become available.

"Broadspeed OfficeSuite more than exceeds our expectations. Not only have we been able to reduce our monthly bills, we have gained a level of options and services that is truly second to none."

*Michael E. Bergman
Bergman Bergman Goldberg & Lamonsoff, LLP*

"The call quality is remarkable... I would recommend the system to a family member. Everything is great about it, including the rates. In fact, Broadview was able to lower my monthly expense by about \$400."

*Mike Alamia
Coldwell Banker Meadow Realty*

Full Featured Hosted IP Phone System

Improve call management, enhance productivity and simplify administration with advanced features that provide measurable benefits.

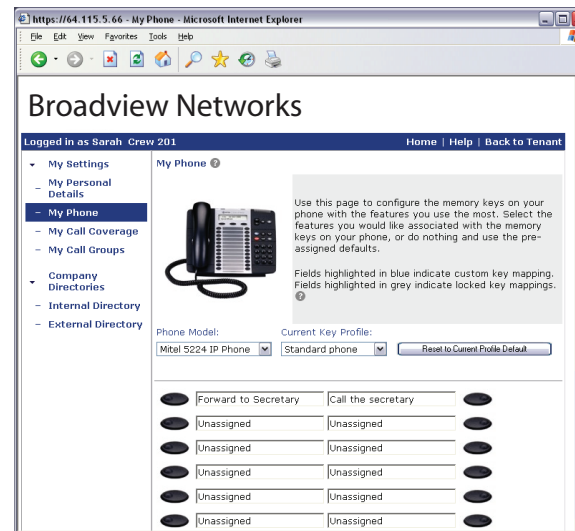

Auto Attendant enables even the smallest of businesses to look large and project a professional image. It ensures effective call handling by allowing inbound callers to select options from a menu of prompts that can route calls to user extensions, company directories and call groups, such as sales or customer service.

Hot Desking keeps your staff accessible, regardless of their office location, and is ideally suited for multi-site organizations. Organizations with shift work can save money by eliminating separate phones or desks for each worker. Users from branch locations, teleworkers and shift workers can have their extension follow them from location to location simply by logging into any phone with their extension and PIN. Inbound calls, permissions and feature settings will follow.

User Administration with a self-service interface is a "must have" feature for all businesses. It provides superior call control for individuals and site administrators from any web browser. At the click of a mouse, you can initiate moves, adds, and changes, and activate phones, without incurring the time and cost associated with in-house or outsourced IT expertise.

Mobile Twinning is a great asset to businesses that employ mobile professionals. The feature enables mobile professionals to have their call coverage rules from their main system follow them to their mobile phone, with the ability to transfer calls back from their mobile phone to their desktop handset when they return to the office. Mobile twinning offers your business tremendous flexibility while providing your customers seamless accessibility, with only one number to call regardless of your location—at the office or on the go.
