

Broadspeed® OfficeSuite Teleworker Solution

Designed for the business with employees that are not located at the corporate office.

With the OfficeSuite Teleworker Solution, you or your telecommuters can work at a home office or other fixed remote location while accessing the OfficeSuite call environment of your main office.

- Use your existing broadband connection (requires static IP address) and router with QoS capabilities to make and receive calls.
- Use the same custom, 3 or 4-digit extension and speed dialing features that you would in your office.
- Remote Access to all of your OfficeSuite services with the professional appearance of being in your office!
- Office quality Mitel telephone provided with service.
- Calls can be transferred directly to your extension from the auto attendant or operator.
- Access and change your call-coverage options from any computer or from the handset itself.
- Never miss a call again, your voice mail message waiting light will alert you to new messages.
- Charges for your calls appear on your main OfficeSuite account and share the same calling plan – eliminate costly home phone bills.
- Use your existing OfficeSuite telephone number and extension number or get a new one for your remote location.

OfficeSuite - Focus on your business, not your phone system.
